NSRMEA is a parastatal of the Ministry of Mines and Steel Development that has been in existence as the Exploration and Mining Division of the defunct Nigerian Steel Development Authority (NSDA) established by Decree 19 of 1971 and made a corporate body through decree 49 of 1992 to amongst others:

- Carry out the exploration of steel raw materials in all parts of Nigeria and elsewhere for the iron and steel industry;
- Establish and execute a steel raw material base for the country; ascertaining the quality and quantity of steel raw materials and their suitability for their respective industrial use in the iron and steel industry;
- Carry out detailed geological, geophysical and geochemical investigations including analytical and laboratory works, cadastral surveys, core drilling, estimations and valuations as may be required for exploration of steel raw materials;
- Carry out geotechnical studies of deposits under investigation with a view to establishing parameters requisite for mining of steel raw materials; and
- Carry out hydrogeological investigations including geophysical studies for water well drilling and development amongst others for domestic and industrial purposes as may be required for the iron and steel industry.

NSRMEA also renders consultancy services to Mineral Title Holders and the general public in the following areas:

- Mineral Exploration and Evaluation
- Drilling services
- Engineering Geology /Geotechnical Services
- Survey/GIS Services
- Geophysical Survey Services
- Geological Resource Management and Environmental Geological Service
- Mineral sample characterization through physical, chemical and mineralogical analysis using SEM - EDX, X-Ray Fluorescence (XRF), X-Ray Diffraction (XRD), Atomic Absorption Spectrometry, Carbon-Sulphur Analyzer, Proximate & Ultimate Analysis and mineral separation studies.

Members of the NMS and other stakeholders of the Nigerian Mineral and Metal Sector, are through this media, called upon to patronize services rendered by the NSRMEA for effective research works and mineral title development.

X-Ray Diffraction Analysis

Mineral Exploration Drilling

California Bearing Ratio (CBR) Test Equipment

Genius IF Xenometrix XRF Equipment

ABEM Terrameter LS-2

Carbon/Sulphur Analyzer
